DETAILED ACTION

This action is in response to the reply filed on June 25, 2009

Response to Arguments

Applicant's arguments filed with respect to the art Lyen on June 25, 2009 have been fully considered but they are not persuasive. As disclosed by the Applicant, Column 2, Lines 60 – 66 of Lyen states “For each embossment 20 the bottom surface of the sheet material in (at least) the area comprising the cavity 25 is provided with a layer of a fluid reinforcing material 40 which, when dried and/or cured, reinforces the cavity 25. This layer is applied to the surface of the sheet material by coating the surface and some of the reinforcing material is absorbed into the sheet material.”. The Examiner disagrees, however, that Lyen is teaching that the whole surface is coated with a film as the reference states that at least the recessed areas are covered and that leaves it possible for the entire surface to be covered. Since at least the recessed areas are covered this also leaves the art capable of leaving un recessed areas without a coating/film. When looking at Figure 1 it can be seen that there is quite a gap between the Braille and therefore a gap between the coatings. A gap between two coatings is not an opening in a coating or film. A divot or perforation would be but an entire separation is not an opening as an opening would be surrounded on all sides by the coating (of film). The art of Lyen is not proper for the rejection of Claim 1.

Applicant's arguments with respect to the prior art of Hermann have been fully considered and are persuasive. The rejection of Hermann has been withdrawn due to

Art Unit: 3725

Hermann clearly showing the entire surface is coated and therefore no openings possible.

Allowable Subject Matter

Claims 1 – 9 and 13 – 19 are allowed with Claim 1 being independent.

Claims 10 – 12 are allowed with Claim 10 being independent.

With respect to the prior art, the record has been made clear with respect to the arguments on prior art in the last three responses filed by the Applicant.

Furthermore, the art of Plaschka et al. (U.S. 2006/0145468) teaches of tactile raised areas with films 30 and 31 (two printed lines) placed on a substrate and due to the raised sections one line moves to each side. However it is originally two separate coatings and like Lyen there is no opening, since they are not together at any point, in the films allowing the substrate to be felt (Paragraph 0097). Furthermore, there is no teaching that the bulge 5 can be felt between the printed films.

Mayer et al. (U.S. 7,311,043) teaches of a tactile area in a bank note surrounded by a nontactile area (Figure 1, Items 2 [non-tactile], 3 [tactile], 5 [tactile]) however the tactile elements throughout the disclosure are not provided as films and further do not have openings to where they are large enough for one to positively say they are touching the substrate between the raised portion or the printed portion of a different feeling (Figures 1, 2, 5a-c, 6, 7).
